Online Judge Platform Guide

Future Network (Data Communications)

TechArena France 2026

1. Upload your model

Open your team application on Agorize, using the same form as registration. Make sure your selected challenge is **Future Network (Data Communications)**.

Prepare your model according to the problem statement, then add **model.onnx** to the submission field. Wait for the upload to finish and check that the file appears in the form.

Open the challenge platform

2. Automatic evaluation

Uploading the model automatically triggers evaluation. There is no need to click **Submit your participation** for the model to be evaluated.

Scoring runs in the background and can take a few minutes. Check the team admin chat for automated evaluation messages.

Each team can make up to **20 submissions per 24 hours**, with a minimum of **30 minutes between submissions**.

3. Read the results and upload revisions

Evaluation results and error reports appear in the **team admin chat**. The report contains the submission score and an error message, if any.

If an error is reported, use the message to correct your model and upload the revised file. The new upload triggers another evaluation. Refer to the problem statement for model requirements and scoring details.

4. Get help

Use the **team admin chat** for questions about your team, uploaded file or evaluation report. Include the filename and any error message so the organisers can identify the issue.

Use the **public discussion board** for questions and discussions relevant to all participants.
